Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series)

Christopher Norman

Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) Christopher Norman

At first sight, finitely generated abelian groups and canonical forms of matrices appear to have little in common. However, reduction to Smith normal form, named after its originator H.J.S. Smith in 1861, is a matrix version of the Euclidean algorithm and is exactly what the theory requires in both cases. Starting with matrices over the integers, Part 1 of this book provides a measured introduction to such groups: two finitely generated abelian groups are isomorphic if and only if their invariant factor sequences are identical. The analogous theory of matrix similarity over a field is then developed in Part 2 starting with matrices having polynomial entries: two matrices over a field are similar if and only if their rational canonical forms are equal. Under certain conditions each matrix is similar to a diagonal or nearly diagonal matrix, namely its Jordan form.

The reader is assumed to be familiar with the elementary properties of rings and fields. Also a knowledge of abstract linear algebra including vector spaces, linear mappings, matrices, bases and dimension is essential, although much of the theory is covered in the text but from a more general standpoint: the role of vector spaces is widened to modules over commutative rings.

Based on a lecture course taught by the author for nearly thirty years, the book emphasises algorithmic techniques and features numerous worked examples and exercises with solutions. The early chapters form an ideal second course in algebra for second and third year undergraduates. The later chapters, which cover closely related topics, e.g. field extensions, endomorphism rings, automorphism groups, and variants of the canonical forms, will appeal to more advanced students. The book is a bridge between linear and abstract algebra.

From reader reviews:

Frances Small:

Book is definitely written, printed, or highlighted for everything. You can learn everything you want by a reserve. Book has a different type. We all know that that book is important matter to bring us around the world. Adjacent to that you can your reading talent was fluently. A guide Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) will make you to be smarter. You can feel more confidence if you can know about every little thing. But some of you think which open or reading the book make you bored. It's not make you fun. Why they can be thought like that? Have you seeking best book or suitable book with you?

Lawrence Richardson:

Book is to be different for every single grade. Book for children till adult are different content. As you may know that book is very important for people. The book Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) had been making you to know about other know-how and of course you can take more information. It is very advantages for you. The publication Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) is not only giving you more new information but also to become your friend when you experience bored. You can spend your own spend time to read your guide. Try to make relationship using the book Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series). You never truly feel lose out for everything should you read some books.

Ann Edwards:

Within this era which is the greater particular person or who has ability to do something more are more special than other. Do you want to become one of it? It is just simple solution to have that. What you are related is just spending your time little but quite enough to get a look at some books. One of several books in the top collection in your reading list is Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series). This book that is certainly qualified as The Hungry Hills can get you closer in becoming precious person. By looking upwards and review this reserve you can get many advantages.

Jean Hogue:

Some individuals said that they feel bored when they reading a book. They are directly felt this when they get a half portions of the book. You can choose the particular book Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) to make your own reading is interesting. Your current skill of reading skill is developing when you just like reading. Try to choose straightforward book to make you enjoy to see it and mingle the opinion about book and examining especially. It is to be initial opinion for you to like to open up a book and read it. Beside that the e-book

Finitely Generated Abelian Groups and Similarity of Matrices over a Field (Springer Undergraduate Mathematics Series) can to be your brand-new friend when you're really feel alone and confuse with the information must you're doing of the time.
