Applications of Hyperstructure Theory (Advances in Mathematics)

P. Corsini, V. Leoreanu

Applications of Hyperstructure Theory (Advances in Mathematics) P. Corsini, V. Leoreanu

Some mathematical disciplines can be presented and developed in the context of other disciplines, for instance Boolean algebras, that Stone has converted in a branch of ring theory, projective geometries, characterized by Birkhoff as lattices of a special type, projective, descriptive and spherical geometries, represented by Prenowitz, as multigroups, linear geometries and convex sets presented by Jantosciak and Prenowitz as join spaces. As Prenowitz and Jantosciak did for geometries, in this book we present and study several mathematical disciplines that use the Hyperstructure Theory. Since the beginning, the Hyperstructure Theory and particularly the Hypergroup Theory, had applications to several domains. Marty, who introduced hypergroups in 1934, applied them to groups, algebraic functions and rational fractions. New applications to groups were also found among others by Eaton, Ore, Krasner, Utumi, Drbohlav, Harrison, Roth, Mockor, Sureau and Haddad. Connections with other subjects of classical pure Mathematics have been determined and studied: Fields by Krasner, Stratigopoulos and Massouros Ch. Lattices by Mittas, Comer, Konstantinidou, Serafimidis, Leoreanu and Calugareanu Rings by Nakano, Kemprasit, Yuwaree Quasigroups and Groupoids by Koskas, Corsini, Kepka, Drbohlav, Nemeč Semigroups by Kepka, Drbohlav, Nemeč, Yuwaree, Kempprasit, Punkla, Leoreanu Ordered Structures by Prenowitz, Corsini, Chvalina IX x Combinatorics by Comer, Tallini, Migliorato, De Salvo, Scafati, Gionfriddo, Scorzoni Vector Spaces by Mittas Topology by Mittas, Konstantinidou Ternary Algebras by Bandelt and Hedlikova.

From reader reviews:

Jeremy Reed:

Now a day those who Living in the era where everything reachable by match the internet and the resources within it can be true or not demand people to be aware of each facts they get. How a lot more to be smart in receiving any information nowadays? Of course the answer is reading a book. Reading through a book can help persons out of this uncertainty Information particularly this Applications of Hyperstructure Theory (Advances in Mathematics) book because book offers you rich information and knowledge. Of course the data in this book hundred pct guarantees there is no doubt in it you know.

Patricia Gagliano:

Reading a e-book can be one of a lot of task that everyone in the world really likes. Do you like reading book consequently. There are a lot of reasons why people love it. First reading a book will give you a lot of new facts. When you read a publication you will get new information since book is one of a number of ways to share the information or their idea. Second, examining a book will make you more imaginative. When you looking at a book especially fictional works book the author will bring you to imagine the story how the characters do it anything. Third, you can share your knowledge to some others. When you read this Applications of Hyperstructure Theory (Advances in Mathematics), you could tells your family, friends in addition to soon about yours publication. Your knowledge can inspire others, make them reading a e-book.

Mary Patterson:

Spent a free a chance to be fun activity to perform! A lot of people spent their down time with their family, or their own friends. Usually they doing activity like watching television, likely to beach, or picnic in the park. They actually doing same task every week. Do you feel it? Will you something different to fill your own personal free time/ holiday? Can be reading a book may be option to fill your free of charge time/ holiday. The first thing that you will ask may be what kinds of guide that you should read. If you want to try look for book, may be the guide untitled Applications of Hyperstructure Theory (Advances in Mathematics) can be very good book to read. May be it is usually best activity to you.

William Evans:

Does one one of the book lovers? If so, do you ever feeling doubt if you are in the book store? Try to pick one book that you never know the inside because don't ascertain book by its protect may doesn't work this is difficult job because you are scared that the inside maybe not while fantastic as in the outside appear likes. Maybe you answer may be Applications of Hyperstructure Theory (Advances in Mathematics) why because the great cover that make you consider in regards to the content will not disappoint an individual. The inside or content is actually fantastic as the outside or even cover. Your reading sixth sense will directly direct you to pick up this book.
