Building Recommendation Engines

Suresh Kumar Gorakala

Building Recommendation Engines Suresh Kumar Gorakala

Key Features

- A step-by-step guide to building recommendation engines that are personalized, scalable, and real time
- Get to grips with the best tool available on the market to create recommender systems
- This hands-on guide shows you how to implement different tools for recommendation engines, and when to use which

Book Description

A recommendation engine (sometimes referred to as a recommender system) is a tool that lets algorithm developers predict what a user may or may not like among a list of given items. Recommender systems have become extremely common in recent years, and are applied in a variety of applications. The most popular ones are movies, music, news, books, research articles, search queries, social tags, and products in general.

The book starts with an introduction to recommendation systems and its applications. You will then start building recommendation engines straight away from the very basics. As you move along, you will learn to build recommender systems with popular frameworks such as R, Python, Spark, Neo4j, and Hadoop. You will get an insight into the pros and cons of each recommendation engine and when to use which recommendation to ensure each pick is the one that suits you the best.

During the course of the book, you will create simple recommendation engine, real-time recommendation engine, scalable recommendation engine, and more. You will familiarize yourselves with various techniques of recommender systems such as collaborative, content-based, and cross-recommendations before getting to know the best practices of building a recommender system towards the end of the book!

What you will learn

- Build your first recommendation engine
- Discover the tools needed to build recommendation engines
- Dive into the various techniques of recommender systems such as collaborative, content-based, and cross-recommendations
- Create efficient decision-making systems that will ease your work
- Familiarize yourself with machine learning algorithms in different frameworks
- Master different versions of recommendation engines from practical code examples
- Explore various recommender systems and implement them in popular techniques with R, Python, Spark, and others

About the Author

Suresh Kumar Gorakala is a Data scientist focused on Artificial Intelligence. He has professional experience close to 10 years, having worked with various global clients across multiple domains and helped them in solving their business problems using Advanced Big Data Analytics. He has extensively worked on Recommendation Engines, Natural language Processing, Advanced Machine Learning, Graph Databases. He previously co-authored Building a Recommendation System with R for Packt Publishing. He is passionate

traveler and is photographer by hobby.

Table of Contents

1. Introduction to Recommendation Engines
2. Build Your First Recommendation Engine
3. Recommendation Engines Explained
4. Data Mining Techniques Used in Recommendation Engines
5. Building Collaborative Filtering Recommendation Engines
6. Building Personalized Recommendation Engines
7. Building Real-Time Recommendation Engines with Spark
8. Building Real-Time Recommendations with Neo4j
9. Building Scalable Recommendation Engines with Mahout
10. What Next - The Future of Recommendation Engines

From reader reviews:

Carol Elliott:

Information is provisions for those to get better life, information today can get by anyone in everywhere. The information can be a know-how or any news even a concern. What people must be consider when those information which is inside former life are challenging be find than now's taking seriously which one is appropriate to believe or which one typically the resource are convinced. If you find the unstable resource then you buy it as your main information you will see huge disadvantage for you. All of those possibilities will not happen within you if you take Building Recommendation Engines as your daily resource information.

Gary Sandler:

Do you have something that you like such as book? The reserve lovers usually prefer to decide on book like comic, short story and the biggest the first is novel. Now, why not striving Building Recommendation Engines that give your pleasure preference will be satisfied through reading this book. Reading addiction all over the world can be said as the means for people to know world better then how they react when it comes to the world. It can't be explained constantly that reading addiction only for the geeky particular person but for all of you who wants to become success person. So , for all of you who want to start reading through as your good habit, you are able to pick Building Recommendation Engines become your own starter.

Hubert Smith:

Many people spending their time period by playing outside with friends, fun activity with family or just watching TV all day long. You can have new activity to shell out your whole day by examining a book. Ugh, you think reading a book can definitely hard because you have to accept the book everywhere? It fine you can have the e-book, taking everywhere you want in your Mobile phone. Like Building Recommendation Engines which is having the e-book version. So , why not try out this book? Let's view.

Jonathan Baker:

That guide can make you to feel relax. This kind of book Building Recommendation Engines was bright colored and of course has pictures on there. As we know that book Building Recommendation Engines has many kinds or style. Start from kids until adolescents. For example Naruto or Private investigator Conan you can read and believe you are the character on there. Therefore not at all of book are generally make you bored, any it makes you feel happy, fun and relax. Try to choose the best book in your case and try to like reading that will.
