Groundwater Discharge Tests: Simulation and Analysis D. Clarke

This book describes microcomputer programs which can be used to simulate or analyse water production well and aquifer discharge test data. Computer graphics are used to help visualise the data, and output to plotters is also catered for. Simple confined aquifers, leaky confined aquifers, unconfined aquifers and a variety of boundary conditions are dealt with. The book and the microcomputer programs it describes will allow the reader to apply very flexible computer techniques to the analysis of his well and aquifer discharge test data. The speed of the microcomputer analyses will give the user the opportunity of looking at his data in more ways than he would otherwise be able to, thus giving insights into the data that would not otherwise be possible. The simulation programs permit the production of type curve data, which can then be used in comparison with the real data, or used in becoming familiar with the operation of the analysis programs. Although primarily intended for practicing hydrogeologists and universities teaching hydrogeology, this book would also be of interest to anyone having an interest in the effects of groundwater extraction. The programs will run on IBM PCs and compatibles with colour graphics.

From reader reviews:

Alex Levey:

Why don't make it to be your habit? Right now, try to prepare your time to do the important act, like looking for your favorite publication and reading a guide. Beside you can solve your problem; you can add your knowledge by the guide entitled Groundwater Discharge Tests: Simulation and Analysis. Try to make book Groundwater Discharge Tests: Simulation and Analysis as your friend. It means that it can to become your friend when you feel alone and beside associated with course make you smarter than before. Yeah, it is very fortuned in your case. The book makes you considerably more confidence because you can know every thing by the book. So , we need to make new experience and knowledge with this book.

Debbie Siegel:

The particular book Groundwater Discharge Tests: Simulation and Analysis will bring that you the new experience of reading some sort of book. The author style to spell out the idea is very unique. In case you try to find new book to learn, this book very acceptable to you. The book Groundwater Discharge Tests: Simulation and Analysis is much recommended to you to learn. You can also get the e-book from the official web site, so you can easier to read the book.

Janelle Garrity:

This Groundwater Discharge Tests: Simulation and Analysis is brand new way for you who has interest to look for some information because it relief your hunger of knowledge. Getting deeper you onto it getting knowledge more you know or you who still having small amount of digest in reading this Groundwater Discharge Tests: Simulation and Analysis can be the light food in your case because the information inside this book is easy to get by means of anyone. These books acquire itself in the form that is reachable by anyone, yep I mean in the e-book type. People who think that in guide form make them feel drowsy even dizzy this publication is the answer. So there is no in reading a reserve especially this one. You can find actually looking for. It should be here for you. So , don't miss that! Just read this e-book kind for your better life along with knowledge.

Helen McCleary:

Some people said that they feel uninterested when they reading a e-book. They are directly felt the idea when they get a half parts of the book. You can choose the particular book Groundwater Discharge Tests: Simulation and Analysis to make your own reading is interesting. Your skill of reading talent is developing when you including reading. Try to choose straightforward book to make you enjoy to study it and mingle the feeling about book and reading through especially. It is to be very first opinion for you to like to available a book and go through it. Beside that the publication Groundwater Discharge Tests: Simulation and Analysis can to be your friend when you're truly feel alone and confuse with the information must you're doing of their time.
