Pesticide Residues in Food - 2011: Evaluations 2011, Part II - Toxicological (WHO Pesticide Residues in Food) World Health Organization

This volume contains toxicological monographs that were prepared by the 2011 Joint FAO/WHO Meeting on Pesticide Residues (JMPR), which met in Geneva on 20-29 September 2011.

The monographs in this volume summarize the safety data on twelve pesticides that could leave residues in food commodities. These pesticides are acetamiprid, dichlorvos, dicofol, emamectin benzoate, etofenprox, flutriafol, glyphosate, isopyrazam, penthiopyrad, propylene oxide, saflufenacil and sulfoxaflor. The data summarized in the toxicological monographs served as the basis for the acceptable daily intakes and acute reference doses that were established by the Meeting.

This volume and previous volumes of JMPR toxicological evaluations, many of which were published in the FAO Plant Production and Protection Paper series, contain information that is useful to companies that produce pesticides, government regulatory officers, industrial testing laboratories, toxicological laboratories and universities.
